

SoundField Surround Zone Quick Start Guide For AU

The Surround Zone plug-in is available for Mac based AU hosts and the installer for this software is available on the CD-ROM or on our website (always check the website for the most up to date version of the software before commencing installation).

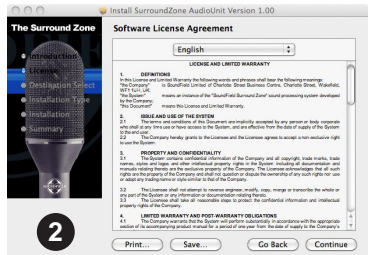

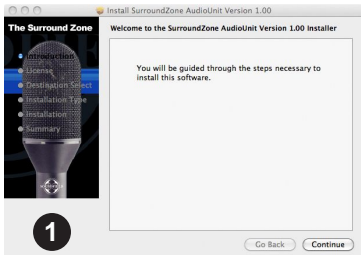

iLok license:

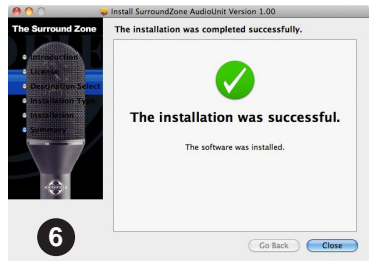

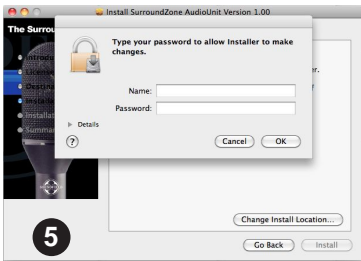

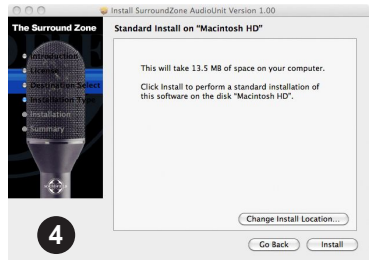

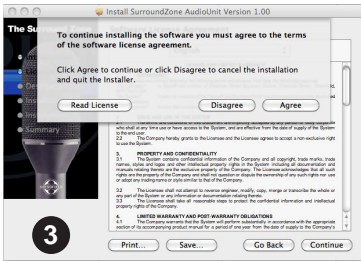

In order to run this plug-in you will require an iLok account and USB dongle. In order to obtain your ILOK license send an e-mail to ilok@soundfield.com with your name, ILOK user ID and the Surround Zone serial number (see outer box packaging). A license will then be deposited in your ILOK.com account. We recommend obtaining your iLok license before installing the plug-in.

When running your AU host for the first time the license will be picked up on your iLok dongle. Should a license not be present on your iLok USB dongle make sure you have loaded it from iLok.com, for further license assistance contact support@soundfield.com

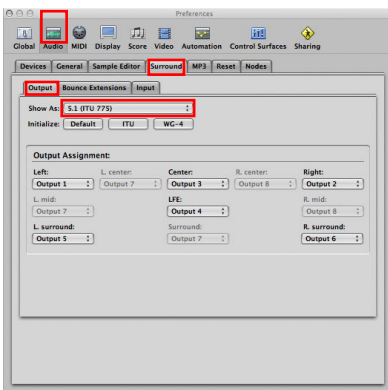

To install your AU version of the SoundField Surround Zone:

Insert the CD-ROM and double click the Surround Zone AU installer **SzoneAUV100.pkg** - this will start the installer. Simply follow the on-screen instructions to complete the installation, this should take no more than a few minutes

Get started with the Surround Zone plug-in using Logic Audio:

Within Logic Audio the surround format is set as a global project preference. To use the Surround Zone plug-in the surround format should be set to 5.1 (ITU 775).

This is done in the:
preferences/audio/surround/output
pane as shown on the left.

The easiest way to insert the Surround Zone plug-in is as follows:

- 1 Add a surround track to your project.
- 2 Insert the Surround Zone plug-in into the surround track (by clicking on the insert tab). The plug-in will appear under the Audio Units/SoundField Ltd tab.
- 3 Import your four channel B-Format wav file into the surround track. The B-Format wav file should be in the following order:
1. W 2. X 3. Y 4. Z
